## light-metal carrying case

Need a portable carrying case for a delicate, electronic instrument? Consider the rugged Bud Transicase—a product of Bud Radio, Inc., 4605 E. 355th St., Willoughby, Ohio 44094.

Lightweight, rigid and corrosion-resistant for all-round, outdoor use, the Transicase employs Alcoa aluminum sheet for all of its flush-fitting panels. And its smoothly contoured lines and gray or blue baked-enamel finish present a handsome appearance.

For added protection of equipment, the Transicase offers a foam rubber lining on the inside of the lid. Other special features include rubber feet attached to the base and back . . . and chrome-plated toggle catches and hinged mountings for the lid.

## sunquest sundial

to mark  
a precious moment  
a place or a memory

the exquisite Sunquest Sundial serves with beauty and charm. It forms a classic garden sculpture and keeps accurate time with the sun.

Fashioned from high-quality aluminum casting, sheet and fastener products, the sundial forms a unity of function and design. The metal, enriched by a clear anodized finish, endures the time it measures, remaining impervious to sun and rain.

The sundial measures 15 x 15 in. and 18 in. high, ideal dimensions for enhancing the beauty of patio, entryway or lawn settings—and for museum, planetarium and other institutional uses. It is made by Richard L. Schmoyer, 335 Stony Battery Rd., Landsville, Pa. 17538.
